

Explosion-proof Pressure Testbay Box

Features

- Working pressure: 15,000psi
- Test medium: Water & Hydraulic oil
- Total thickness of protective steel plate: 62mm
- Cameras inside the box: 5MP(million pixel) Ultra HD Night Vision PTZ Camera
- Safely loading with overhead crane
- Conduct pressure tests on various pressure vessels, pipelines, valves, etc.

Introduction

This is the next generation in pressure test safety. Wingoil's products are the superior alternative to pressure test bunkers constructed with high-strength steel plates and bulletproof insulation materials. Its splicable, portability and modular characteristics allows personnel protection to be formed more efficiently than traditional high pressure test units.

HPU

- Max working pressure - 15,000 psi
- Manual control

PTB Console

- Visualization of box pressure test status
- Automatic control

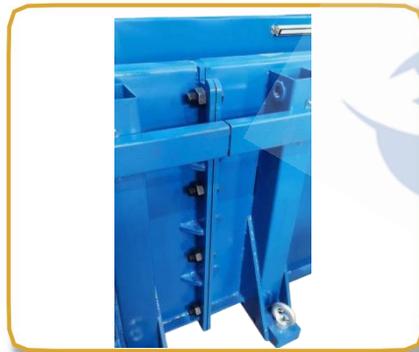

Hoisting Place

Use a crane or forklift with a load capacity greater than 5T for lifting or transferring.

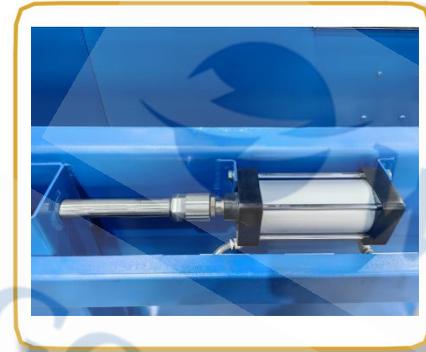

PTZ Camera

Provide comprehensive monitoring of the test workpiece.

Splicing Place

Align the bolt holes at the end of the box, then insert the bolts and attach the nuts.

Cylinder

Control the opening and closing of box doors.

Indicator Light

Red, yellow and green lights indicate the operating status of the equipment.

Control Panel

Machine-engraved, with simple and clear interface operation.
